

Introducing the world's first eco-friendly PAPER REUSING MFP System

World's first eco-friendly MFP system, the e-STUDIO 306LP/RD30 erases images and text from printed documents

PRINT - ERASE - REUSE

The e-STUDIO 306LP MFP combines with the e-STUDIO RD30 for removing the toner colour from printed documents:

- Cost-saving and a positive 'green' effect in the office today
- Paper usage is reduced to one-fifth
- Support copy and print speed of 30 ppm

The e-STUDIO 306LP/RD30 houses Intelligent Green MFP Technology with the built-in erasing system, allowing users to refill their paper tray five times with the same paper. The RD30 is able to sort paper into reusable and un-reusable sheets, at the same time as removing the toner colour and digitizing the documents prior to erasing.

Lower ecological footprint of every e-STUDIO 306LP/RD30 MFP - with 55% reduction in the system's total CO₂ emissions, thus helping enterprises adopt business strategies that contribute to sustainable development.
